

CABLE PLOW BRON V100

Price **150 000\$**

Year of manufacture 2021

Running hours: 400

Maximum Depth 1,55 m

Max. diameter of cable 40 mm

Designed for the construction of main infrastructure networks in difficult geological conditions.

The vibratory plow allows simultaneous independent laying of several polyethylene cases or cables with a diameter of up to 40 mm in soil of the 5th category of complexity.

Works regardless of the season or weather conditions.

The equipment is designed and manufactured in Canada, adapted to difficult weather conditions and conditions of northern regions.
